**Remarks Section**

[A suggestion offered by Mr. Fenn C. Mathew whose helpful direction relating to patent amendment process is greatly appreciated.]

This radical innovation relates toward a plasticized, elastic, flexible, pliable, stretchy, bendable, springy tangible completely hollow incarnation specifically formulated in the shape of a human hand which slips snugly within any standard style, category or contour of hand ware referred to as a glove and allows an actual human hand to slide totally and completely within its own confines thereby becoming a glove within a glove.
